

Intelligent scrap management is a key business strategy.

Maximize your scrap return by partnering with an expert who has the experience, personnel, equipment and resources to purchase, collect, transport, clean and prepare your scrap. A recycling company that offers design and engineering, financing, investment in on-site equipment, facility operation, marketing of ferrous and non-ferrous metals, logistics, transportation, and administrative support. One that can train your personnel, or utilize their own full-time associates – whatever it takes to ensure your program's success. Simply put, a turnkey single-source scrap management solution that's environmentally compliant.

You know your business and we know scrap. Helping you turn it into a revenue stream is our specialty. With over 75 years of experience, Sims Brothers Recycling has developed strategies and tools that have helped medium-size and large companies dramatically cut costs and add millions of dollars to their bottom line.

Sampling of Sims Brothers Industrial Plant Customers

- Major U.S. appliance manufacturer – 3 plants since 1957
- Major automobile manufacturer – 5 plants since early 1980's
- 10 Tier 1 & 2 automotive parts plants in Ohio & Indiana
- Outdoor power equipment manufacturing plant
- Food processing plants
- Container and paper goods plants
- Lighting parts manufacturing plant

It's easy to see why Sims is the natural fit for so many companies:

Earn more money on your scrap

- Thorough, accurate pricing documentation.
- Current market-based pricing for your scrap on the day we pick up your material.
- Up-to-date summaries detailing all of your scrap revenue, including certified scale tickets.

Cut labor costs

- We have significantly cut the amount of time our customers' employees spend handling scrap.
- Concise on-site scrap handling training for your employees to reduce time and labor costs.
- Flexible, cost-saving pick up scheduling.

Get the best tools

- Containers and material handling tools designed to minimize labor, space requirements and collection and transportation costs.
- We'll work with you on equipment ownership and financing programs.
- Segregating material offers a terrific ROI. We offer custom signage, color-coding and other techniques to aid employees with segregating material.
- Reduce or eliminate EPA concerns.

To maximize return on your business scrap processing, please contact Sims Brothers Recycling and let us sort it out for you.

Scrap Management Maximization

Let Sims Brothers Sort it Out for You!

Sims Brothers
RECYCLING

Treating Customers Like Family for 75 Years.

www.simsbros.com

Family values are our Business Values.

You might say our business philosophy exemplifies the Sims family values, **Do What You Say You Will Do (DWYSYWD)**. We put our integrity and reputation on the line in the marketplace every day in everything we do. We're focused on making our customers happy by treating them with friendly, old-fashioned, neighborly respect.

You can expect fast decisions and the personal relationships of a family business, as well as a commitment to a long-term partnership and your bottom line success.

It's like the lesson the Sims brothers, Don and Carl, taught us 75 years ago. When you put your heart into a family business, it's in the right place.

Recycling Audit Services.

Increasing your scrap revenue begins with a free recycling audit – a visual inspection that details the types and volumes of your recyclable materials, and a careful evaluation of your company's production processes. Then we sit down with you to propose fresh solutions for capturing the broadest diversity of materials possible. Finally, acting as your value-added partner, we join forces and problem solve together, arriving at a cost-conscious recycling strategy that is environmentally compliant, while adding to your bottom line.

Transportation and Freight Management Services.

We provide direct trucking services to industrial scrap-metal generators and consumers throughout the Midwest. Plus we maintain priority-service relationships with numerous commercial truck lines and owner operators.

Our transportation-services group coordinates innovative logistics and transportation solutions for shipment by truck, rail and overseas container. A full range of equipment is at your disposal to keep your transportation expenses and risk to the environment low. We maintain and service our own private fleet of over 1,000 trucks, trailers and custom-designed 15 thru 70 yard rolloff containers, lugger boxes and in-plant hoppers at our maintenance garage and weld shop.

Pick Up and Pay Services.

For many recycling and scrap businesses, our Pick Up and Pay service is both convenient and cost effective. We'll pick up your metal scrap so you don't have to take the time to deliver it, or incur transportation costs, and we'll pay you a fair and competitive price – on the spot.

Plant Dismantling and Old Equipment Tear-out Services.

As well as operating our own demolition and equipment removal crew, Sims Brothers partners with owners and/or demolition contractors to get full scrap value from dismantling buildings, second-hand machinery, equipment, dies and other recyclable materials. We can help you in a variety of ways – identification of materials, dismantling, destruction and cutting to transportable size, sorting, loading, transporting and purchasing the scrap metal recovered from your work site.

Value-Added Services.

If you need a value-add process done to your material (shearing, torching, shredding, grinding, baling, etc.), but don't have the capacity, expertise or equipment, we can be of service. Our value-added services can reduce your costs for capital investment, space requirements, parts inventory, maintenance, environmental compliance and labor.

Environmental Compliance.

We are so enthusiastic about health, safety and the environment that we are one of the few companies our size that employs a full-time Safety/Environmental Director. We are committed to operating in an environmentally responsible manner that protects human health, natural resources, and the environment.
